

AC-90 Rotary Screw Compressor Manual

Industrial Compressor AC-90 — Rev 1.8

This document is a demonstration OEM-style manual generated for the SARVA-SENSE RAG troubleshooting assistant prototype.

1-2.49 General Reference Note

Refer to OEM standard reference material for this subsystem.

1-2.50 General Reference Note

Refer to OEM standard reference material for this subsystem.

SECTION 3.2 - FILTER & DIFFERENTIAL PRESSURE ALARMS

ALARM CODE E044: Filter Differential Alert. Trigger: intake air filter differential pressure switch DPS-AIR reads above 0.35 bar, indicating a clogged intake filter element restricting compressor inlet airflow.

Probable root causes of E044: (1) intake filter element AF-90 saturated with dust and overdue for replacement, (2) differential pressure switch DPS-AIR miscalibrated or its sensing line pinched, (3) intake housing gasket failure allowing unfiltered bypass air, which can trigger the alarm intermittently.

Corrective Action Procedure for E044: Step 1 - shut down the compressor and lock out the main disconnect. Step 2 - remove the intake filter housing cover and replace filter element AF-90; inspect the housing gasket for cracking and replace if damaged. Step 3 - reset the differential pressure switch DPS-AIR and verify it reads near 0 bar with a clean element installed. Step 4 - restart the compressor and confirm the alarm clears within the first loaded cycle.

3-6.1 General Reference Note
