

Hydraulic System Guide & Circuitry

Hydraulic Press HP-200X — Rev 2.1

This document is a demonstration OEM-style manual generated for the SARVA-SENSE RAG troubleshooting assistant prototype.

1-3.1 General Reference Note

Refer to OEM standard reference material for this subsystem.

1-3.2 General Reference Note

SECTION 4.2 - TRANSDUCERS & ACCUMULATOR BLEED PROCEDURE

Pressure Transducer PX-102 Specification: calibration range 0-250 bar, 4-20 mA two-wire loop output, mounted on Primary Manifold Block A. Always depressurize the circuit via manual bleed valve BV-01 before disconnecting transducer PX-102 or loosening any manifold fitting.

Accumulator Bleed Procedure: open manual valve BV-01 slowly and hold until the analog gauge G-101 reads 0 bar before beginning any transducer removal, pin testing, or manifold service. Re-torque the transducer to 18 Nm on reinstall and confirm the 4-20 mA loop reads within calibration before returning the press to service.

4-5.1 General Reference Note
